

# GHGA | METADATA CATALOG

A public portal for the discovery of human omics study data from German research institutions.

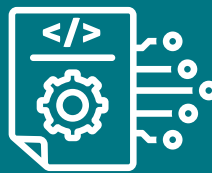

<https://catalog.ghga.de>

Discovery platform for human omics data available for research that can be requested from one of the GHGA Data Hubs.

Limited to datasets that are managed at one of the GHGA partner sites.

The datasets are annotated following the GHGA Metadata Model, which is compatible with the metadata model of the EGA.

Once access requests are approved by the data owner/controller, data will be made available via external partners, e.g. via EGA or other existing infrastructures.

In addition to the current functionality of displaying public metadata, the upcoming **GHGA Archive** will store the actual omics data and make it available to other researchers after approval by the data controller.
